

Maintain the
quality of life of
your patients

LaEvita™

Gentle.
Safe.
Effective.

Our body. Our self-confidence.

In the course of their lives, women go through various physical changes that are associated with aging or hormonal variations.

Such natural processes can cause symptoms that require medical treatment, such as stress incontinence, which affects around one in three women. Around half of menopausal women suffer from vaginal atrophy, which is often associated with a decline in sexual well-being.

The global market for women's health is growing steadily and is opening up new approaches with innovative treatments such as LaEvita laser technology, enabling women to achieve a sustainable improvement in their quality of life.

Gentle laser treatment at every stage of life.

LaEvita™ is a modern, non-invasive solution for relieving common symptoms of the menopause.

Vaginal atrophy, discomfort and mild incontinence are symptoms that can affect the well-being of many women.

With LaEvita™, biolitec provides gentle outpatient laser treatment that promotes vaginal elasticity and significantly alleviates discomfort with no anaesthesia and minimal side effects.

Minimally invasive and virtually painless.

No surgery necessary.

Improved elasticity and moistness.

Long-lasting, natural results.

A quick return to everyday life.

Significant results* in improving symptoms with LaEvita™.

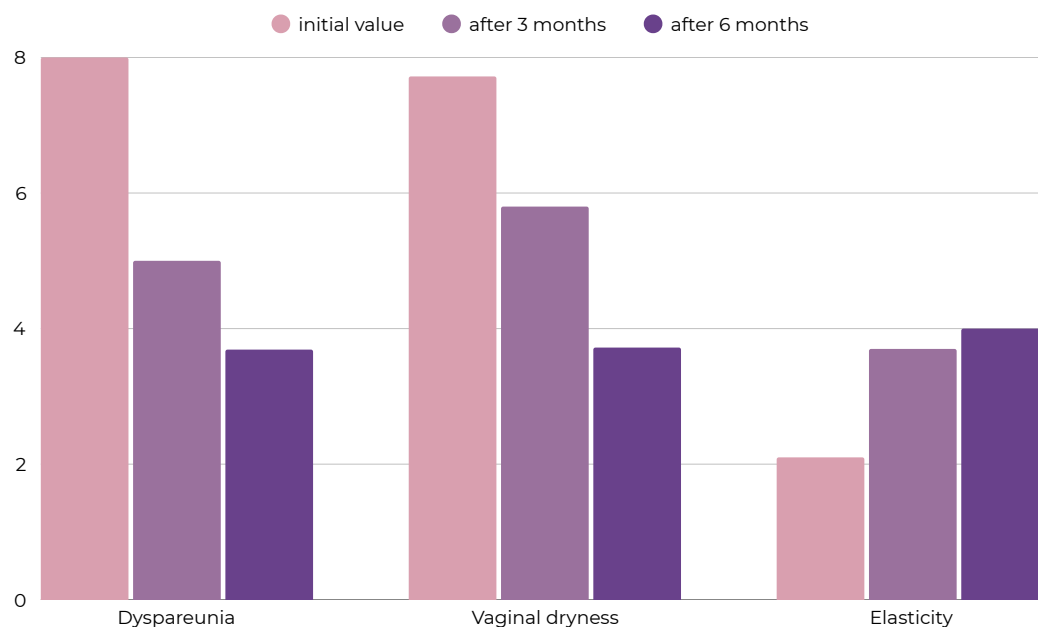

50% less pain*

50% less dryness*

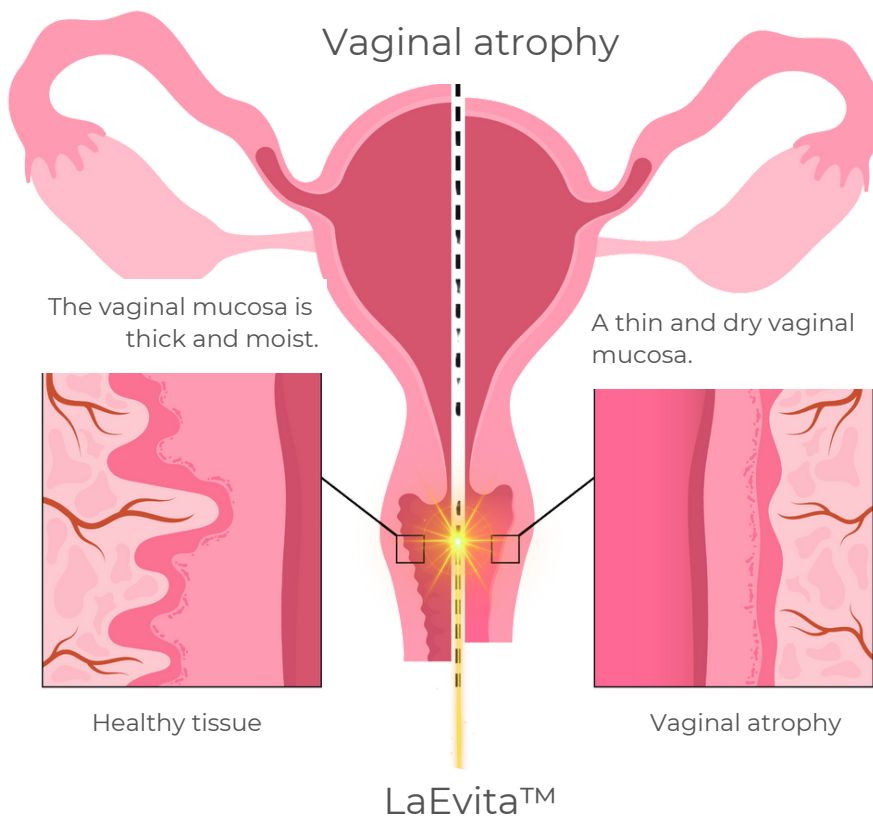

Sexual function improved by 50%*

A recent study* of LaEvita™ laser treatment showed remarkable results in patients with symptoms such as vaginal dryness, pain and impaired sexual function. The results showed an improvement in symptoms of around 50%, which means considerable relief for patients and a significant improvement in their quality of life.

How does LaEvita™ work?

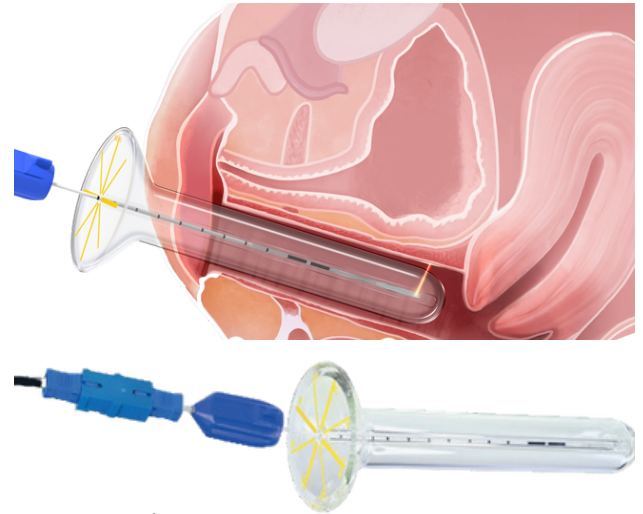

LaEvita™ laser treatment uses gentle, precise energy to promote collagen production in the vaginal tissue. This leads to improved elasticity and moistness of the mucous membrane and supports long-term well-being – safely, quickly and without surgery.

How does LaEvita™ work?

The LEONARDO Mini 1470 and LEONARDO DUAL 45 Laser. The complete solution for gynaecology and more.

LaEvita™
handpiece

The technique only requires use of the LEONARDO DUAL 45 or LEONARDO Mini 1470 laser, the reusable LaEvita™ handpiece and the kits for treatment of vaginal atrophy or urinary incontinence.

Areas of application of LaEvita™.

Throughout their lives, women experience different phases and hormonal changes that can affect their health and well-being. After pregnancy, childbirth, hormonal fluctuations or in old age, symptoms such as weakness of the pelvic floor, slight incontinence and vaginal dryness often occur. These changes can affect general well-being and intimacy.

STRENGTHENING OF THE PELVIC FLOOR

Strengthens and supports the tissue to relieve mild incontinence.

ELASTICITY AND MOISTNESS

Promotes natural hydration of vaginal tissue.

SUPPORT FOR INTIMACY

Increases well-being and self-confidence in sex life.

All fibres are free of latex and DEHP.
Our fibres are single use products
(unless otherwise indicated)
delivered sterile for immediate use.
